BASIL PERRY
COOL SPRING, - DELAWARE

Friends and Patrons.

In presenting herewith my new Catalogue, I wish to express the desire that it will fill the purpose for which it has been written, viz: in assisting you to make a selection of plants, etc., which will give entire satisfaction and at the same time will be a credit to my business.

My aim has always been and always will be to give entire satisfaction to all of my customers. My object first, last, and all the time, is once a customer always a customer. I have placed in my list the best varieties of strawberries. Those possessing the greatest points of merit and the least faults for the home garden or the commercial grower. I believe no better varieties or plants could be selected. My interest with you does not end when I sell you plants. I want them to grow, do well and make you money. Sussex county, where I live, grows and ships more strawberries than any other county in the United States, and it is said by the best authorities that plants are better when grown in a section where strawberries do well. There are stations in my county where thirty to thirty-five cars are loaded in a single day.

If you believe the plants you plant cut any figure in the results, if you think the best is the cheapest in the end, and if you want to be sure of getting the variety you buy in the condition to make the most for yourself, I ask you to investigate the plants I grow. I don't claim to sell plants cheaper than anybody else. I am not competing with the man whose stock has nothing but cheapness to recommend it, and it is not to your interest to buy that kind. My claim is that I am producing the best, strongest, most vigorous, most prolific plants that can be grown in a well-favored climate, and that I am selling them at a reasonable price. Is this the kind you are looking for? If so, may I have your orders? We have a clean certificate; no plant disease or injurious insect such as Aphis, Strawberry Weevil, Grubs, and so forth, found on our premises. Our plants are well fed, strong, vigorous, healthy. Just the kind you want to build a foundation for a successful crop. I am anxious to serve you and have the stock and facilities for doing so. Let your order come.

With many thanks to those who have given me such a liberal patronage in the past, and assuring them that I shall ever strive to merit a continuance of their patronage and good will, I beg to remain, Yours for fair and honest dealings.

BASIL PERRY

P. S.—As to my reliability I refer you to the Postmaster and Express Agent here at Coolspring, and to the Sussex Trust, Title and Safe Deposit Co., Lewes, Delaware.

Certificate of Inspection

TO WHOM IT MAY CONCERN :

DOVER, DELAWARE, Sept. 6, 1912.

This certifies that I have this day examined the nursery stock and premises of the nurseries of Basil Perry at Coolspring, Sussex County, Delaware, and that said nursery stock is apparently free from crown gall, peach yellows, peach rosette, the San Jose Scale, and all other plant diseases and insects of a seriously dangerous nature.

This certificate may be revoked by the State Board of Agriculture for cause and it is invalid after August 31, 1913, and does not include nursery stock not grown on the above named premises unless such stock is covered by certificate of a State or Government officer and accepted by the State Board of Agriculture.

WESLEY WEBB, Inspector.

Strawberry Plants

HELEN DAVIS.—Early to late. From all reports this is the best strawberry ever introduced. It has been tested on all kinds of soils with the highest success. The berries of Helen Davis are very large, many of them averaging as large as medium sized hen's eggs. The fruit has the smoothest surface of any variety we know. In color it is a subdued crimson, and the color extends from centre to circumference. The flavor is like no other strawberry and is delicate and delicious; the velvet quality of the meat gives to the Helen Davis a distinction absolutely its own. When it comes to productiveness, no other variety ever developed can out-yield it, and its capacity for endurance under trying circumstances, shows it to be a marvel of vitality. I bought my stock of Helen Davis plants of the R. M. Kellogg Co., the introducers.

Be sure and try some Helen Davis. I am sure that it will please you.

CHESAPEAKE.—There has been for several years a place for a late variety that would produce berries that were equal to the Gandy, and that would prove a little more productive especially on dry soils. It looks like that place has been filled in the Chesapeake, for while not quite so late as the Gandy with us it was late enough to be out of the way of the mid-season kinds. The strong point to be urged in its favor is the splendid shipping qualities and very handsome appearance of the berries. There are many reliable reports to prove that Chesapeake sold for more money than any variety shipped during the season of 1912. And while we are not sure that it will bear more fruit than the Gandy, if Gandy is given a location that exactly suits, we are sure that on an average it will prove very much more productive. It is a splendid grower, making just enough plants for a matted row, but too few to make it possible for nurserymen to sell them at a very low price. There is no sign of rust or other disease about them, and the plants are heavily rooted and stocky. We feel reasonably sure that our customers will not regret planting quite heavily of Chesapeake, for while there may be an overproduction of small, inferior or poor shipping berries we do not think there is any danger that there will be too many berries of the handsome appearance, and splendid shipping qualities, combined with high quality that is to be found in the Chesapeake.

BUBACH.—This berry has been thoroughly described year after year, but for the benefit of those who have not grown them we would say that the fruit is of the largest size, oft times coxcombed. It is not at all unusual to find berries of this variety weighing an ounce to an ounce and a quarter. It will do fairly well under poor cultivation, but responds freely to good food. The plant is perfect, having dark foliage; very stout crown; a prolific grower and only sets enough plants to give good sized berries; season medium to late.

BRANDYWINE.—A variety that thrives on almost any soil. In season it is medium late. The berries are large, broad and heart shaped, of medium red color, with bright yellow seeds and firm flesh, which is red through and through. These points, combined with large size, productiveness and firmness of texture, make the Brandywine a very valuable strawberry, especially as it has a peculiarly rich, spicy flavor that charms all who taste it. This variety gives general satisfaction throughout the country. It originated in Pennsylvania, does well all through the North and Middle States, as well as being a standard and safe berry to plant in California, Florida, the Bermudas, and other tropical and semi-tropical countries.

SENATOR DUNLAP.—Late. The plants are strong, healthy growers, with bright green, upright foliage. The berries are large, of handsome, dark red color, uniform in size and shape, which is conical. The meat is red through, firm, juicy and of fine texture. The flavor is very delicate. The popularity of this excellent sort increases steadily, owing to the extraordinary records which it has to its credit.

GLEN MARY.—Strong, upright growing plants, with large, dark green foliage. In rich ground under high cultivation, it produces remarkably good crops. The berries are large deep red; the meat is firm, juicy and of unusually good flavor. Ideal for canning and preserving. Best shipping sort. Season medium.

TWILLEY.—I expected to fruit this last season, but did not have enough plants to fill all my orders for it, and I can only say that the plant growth is very satisfactory here, and it promises to become a leading market variety. Mr. Allen, the introducer, says:—It has proven all that we claimed for it and in reality has exceeded my expectations. Large commercial growers who have seen this variety speak in the highest terms of it. It is large in size well colored, and what is very important to the commercial grower, it is exceedingly firm. I believe it will equal in this respect any berry that has ever been produced. The Twilley will hold an important place among the list of fancy strawberries whether wanted for the home garden or for distant commercial shipping. Time of ripening medium late.

GOLDEN GATE.—Originated in Massachusetts by S. H. Warren, who is a good judge of strawberries, and was largely instrumental in bringing the Marshall before the public. The Golden Gate is a strong grower, with numerous plants of luxuriant dark green foliage. It has a strong staminate blossom, with lots of pollen, which produces strictly fancy, large fruit clear to the end of the season. It has a rich crimson color, with no green tips.

EARLY OZARK.—After fruiting this again I consider it one of the best early varieties for the commercial grower as it has large size, firmness and productiveness, which is lacking in so many of the early varieties. With me the fruit is fully as large as Gandy, and as firm as any variety I ever saw. It does not make as many plants as most early varieties, but the growth is all that one could wish, as the plants are extra large, many of them being double with several crowns, and the foliage is tall, thick and leathery, without any disease. Ripens here as early as Excelsior, dark red to the center and of good quality. The originator says:—It is a cross of Excelsior and Aroma. In size large to larger than any of the late varieties, such as Aroma or Gandy. Fifteen berries filled a quart rounding full. Very productive and firm, of good flavor. Foliage very large, does not blossom in late fall and winter as many early varieties do, and is not so easily killed by frost and freezing.

FENDALL.—This berry was originated by Charles E. Fendall, of Baltimore county, Maryland. The plant is strong, vigorous and healthy. Foliage a beautiful light green, easily distinguished from other varieties and has not shown the slightest blemish in any respect. The berries are very large and of fine flavor. It is wonderfully productive, the berries lay in piles around the plants, good plant maker. The berries are beauties, rich in color, smooth and glossy, with long stems, a large showy cap. I think it will become a general favorite when it is well known. In 1906 its yield was at the rate of 16,800 quarts per acre with originator.

DUNCAN.—This variety is very popular; its season being a little later than Parson, and from four to eight days earlier than the Gandy, and so much does the fruit resemble the Gandy that one would hardly know the difference; also vines resemble same. It is one of the greatest plant makers, and should be thinned out to bear a fair crop. It will stand up with the Gandy as a shipper. No grower of strawberries will go out of the way by setting the Duncan for a mid-season sort.

PAUL JONES.—This is a pistillate variety, and is claimed to be a seedling of the Haverland and Brandywine. It has been thoroughly tested in different soils, with all kinds of treatment, and has never been found wanting. It is wonderfully productive of beautiful berries, and the most wonderful of all, will keep a week and be just as handsome as when first picked. Of a brilliant, glossy color, which seems to have a varnished surface, is an excellent shipping variety. It is claimed that berries kept a week in a common house-cellar, were exhibited at the Worcester County Horticultural Society by the side of fresh-picked berries, and the only difference in appearance was the added richness in coloring of the week-old berries. It is fully as productive as Haverland or Sample. Season medium late.

OREM.—The Orem is a vigorous grower and has fine foliage to protect the beautiful berries from the hot sun. It comes in with the Gandy and bears an abundance of fine berries after the Gandy is gone, and bears about three times as many as the Gandy. The berries are exceedingly large and smoot, light red with yellow

seeds and dark green caps which make them very attractive. Being very firm it can be left on the vines two or three days after they are ripe and still be in first-class shape for market. Everything seems to favor this berry. It is one of the kind that bears under almost any condition.

NORWOOD.—Believed by many to be the best all-around strawberry. Strong, healthy, making many strong runners. Berry conical, of splendid quality; size unequaled (some berries 3 inches in diameter), bright red all the way through, growing darker with age; is firm, good keeper, ships well. Perfect blossoms, and holds size over long bearing season. Medium to late.

DICKEY.—Judging by the demand for the plants this variety gives general satisfaction, as we sell large quantities of them in all sections and have never yet had enough to fill all orders. The fruit is very large and of fine quality, but is uneven in shape. The plants are very large and good growers anywhere, with tall, bright glossy green foliage, without rust or blight. It is from the originator of the Sample who says it is a better berry, as large and productive, and very firm; colors all over at once; no green tips; very fancy.

KING EDWARD.—Originated by D. J. Miller, of Ohio. The plants as grown here have made a very good showing. Large plants, large foliage and a free grower. The fruit is also large, good quality, moderately firm and productive. After fruiting it the past season I was very well pleased with the variety. C. S. Pratt, of Reading, Mass., has become very enthusiastic over King Edward, and he says; "The King Edward is to the strawberry what the Baldwin is to the apple, Concord is to the grape, the Bartlett to the pear, etc." This is certainly very strong testimony. It is no doubt an excellent berry for most any purpose and, as stated above, I was very pleased with it the past season. Mr. Miller, the originator, is also very enthusiastic over his new berry, and he says, "The King Edward has been tested from the Atlantic to the Pacific. All things considered, it is the greatest berry I have ever grown, and I expect it to meet with great success." I would advise all who read this catalogue to plant a few and try it for themselves, it may prove valuable to you.

HAVERLAND.—One of the most productive varieties in cultivation. Medium season; size medium to large, bright red, rather long and pointed, very tempting in appearance, very hardy, and one of the best that can be planted. Should be pollinated with some good staminate sort.

ABINGTON.—Perfect in blossom. A vigorous grower; quite productive of large, firm, well-colored berries, suitable either for shipping or home use. A good berry that will generally give satisfactory results, I have been growing it for several years, and it has always been good.

BARRYMORE.—A new variety from Mass., that was awarded several first prizes by the Mass. Horticultural Society. The plants are very good grower, large and free from disease. The fruit is large, dark red, firm, of excellent quality and very productive. Ripens in mid-season and on account of its large size, firmness, color and keeping qualities will become popular as a market variety.

WARFIELD.—A well known standard variety, very productive, mid-season. Fruit good quality and highly colored. It is a persistent plant maker, and if not kept thinned out they will mat so thick that it will be impossible for them to bear fruit of a desirable size, but if kept thinned it is very productive, of medium size, highly flavored fruit. Season medium.

SUCCESS.—This wonderful berry is all that its name implies. It is a success from start to finish. Very vigorous grower, large fruit of high color, regular shape, a wonder of productiveness. Begins to ripen early and continues a long time in bearing. Holds out its large size all through the season.

STEVEN'S LATE CHAMPION.—(Per.) In plant growth this variety resembles the Gandy, except that it has a heavier and shorter fruit stem and is a much better plant maker. Healthy, vigorous and long rooted, nearly an ideal plant, and three times as productive as Gandy. Fruit large. Dark red in color. Uniform in shape and size. Very high in quality, and exceedingly firm. This variety with us has proven to be fully as late in ripening as Gandy, and will prove a money maker for those who want a late berry.

CORSICAN.—This grand berry was first called Big Berry. It is not only a big berry, but such a sweet rich fruit as to entitle it to a place in the first rank among the best strawberries for table use. Corsican gains friends every year both for home use and for market. It is of bright rich color and large size and in high quality. It has few equals. Not so heavy a bearer as some other sorts, but always to be depended on for a good crop of extra fine berries. Season medium.

BUSTER.—During the spring of 1905, when nearly every other variety of strawberries were killed by a late May frost, the Buster gave us a full crop. It is very vigorous and healthy, having a luxuriant dark green foliage, that defies a reasonable amount of dry weather. The fruit holds up large through its long season. This is a good reliable variety that I advise my patrons to plant. It will please you from the time it starts to grow after you set the plants until you have vested your crop. The Buster is one of the good things that seems to have been overlooked by a great majority of growers. It is a cross between Bubach and Sharpless, of large size, bright red in color, moderately firm, medium quality and medium to late in ripening. The blossoms are pistillate, but extremely hardy.

GANDY.—This standard late variety needs no description. For best results must be planted in black swamp or rich stiff soil. It is a good grower with tall, healthy foliage and produces large, even, dark crimson berries, that when fully ripe, are of excellent quality. It is a splendid shipper and always brings fancy prices. By planting another late variety with perfect blossoms with it you will find you will get better berries and a much larger yield.

MARSHALL.—Too well known to need any extended description. This berry has been popular in the New England market for years; the grocers are always delighted to get it on account of its rich, dark red, glossy color, that is bound to attract and please the customers. It is one of the richest-flavored strawberries grown. It is a strictly fancy berry, but not quite so productive as some other varieties. Its large size and fancy quality, however, will go a long way toward making up this deficiency. This berry finds a ready sale in any market.

MASCOTT.—A new late sort of unusually large size and productiveness. Grown for several years around Selbyville in the southern part of this State. Grows in popularity every year and will be extensively planted all over this section the coming spring. Season same as Gandy, lasting longer and usually producing a much better crop of equally good berries. Has been found to do well on land too dry for Gandy.

LEA.—This is a new berry that I have not fruited as yet. If what is said of this variety comes true as an early market berry, it will soon take front rank. It is a strong vigorous grower, without a spot of rust. Blossom perfect, very firm and productive. It ripens evenly all over at once without green tips. Size medium large. It is said to stand rainy weather better than other varieties. For best fruiting results, it should not be allowed to mat too thick on the rows.

AROMA.—Plants large, very vigorous and perfectly healthy. Makes plants just right for a good fruiting row. The blossom is rich in pollen, a good fertilizer. For late pistillate varieties. Fruit large to very large, roundish, conical, smooth and perfect in form, of a beautiful bright glossy red in color, very firm and of excellent quality. Will give splendid results on any soil that will grow a good crop of corn or potatoes. It is as late as Gandy, of long season. Three times as productive and a sure cropper every year. During the past five years the demand for plants of this variety has been very heavy, and we have never been able to grow plants enough to meet this demand. Last spring we planted heavily to Aroma and believe we have plants sufficient to fill all orders which may come our way this season.

BETHEL.—I have been watching it several seasons; and I recommend it as one of the very best, ripening in early mid-season, and being remarkable for the length of season and the immense crop of large remarkable berries it will produce. The plants are very large, tall and splendid growers on any soil, and it has been tested on several kinds. I want all of my customers to try it if only by the dozen or hundred, but you need not be afraid to plant liberally of them, for it is sure to become a leading commercial variety in a short time. The originator says: "Probably one of the greatest strawberries discovered in recent years is the 'Bethel,' originated and developed to its present valuable state by R. F. Thomas, who has been growing and fruiting it for the last four years. Its extreme earliness, beautiful color and aroma, immense size and fine shipping qualities, and being both early and late commend it to every market fruit grower. As an eater it has no equal and its flavor is unsurpassed, strong upright grower and perfect blossom. Abundant testimonials can be had as to its long season of bearing marketable fruit—over three weeks—without any noticeable falling off.

PARSON'S BEAUTY.—A good healthy grower and immense cropper, of large solid berries of good form, color and quality. There is probably not a variety among the standards that will outyield it; or a more reliable. A first class variety with a long season. Begins to ripen with Tennessee and extends its season into Gandy. Dark brilliant in color, flesh dark red. It was originated in Maryland in a noted strawberry section. It has been extensively planted and is in greater demand than ever. The plant in growth resembles Bubach and will make twice as many plants to the acre. Is a strong, perfect bloomer and a desirable variety to plant with varieties like Bubach

TENNESSEE PROLIFIC.—A grand berry. One of the best market sorts. Good shipper, succeeds almost everywhere. Vigorous plant, and exceedingly productive of large, bright showy fruit, perfect blossom and free from rust. Is one of the best varieties to plant with imperfect varieties. Don't fail to include some Tennessee in your order. Season medium to late.

CARDINAL.—Originated in Ohio by Mr. George J. Streater, and introduced by the Templin Company, of the same State. It makes a vigorous growth, very productive, very firm and handsome. It looks so well and yields so well, and, being easily grown, it is claimed to be one of the most profitable market varieties in Ohio. The berries average large and are bluntly conical, with a bright green cap that holds up remarkably well after shipping. It possesses the solidity of the old Wilson, united with the vigor of plant, prolificacy and brightness of color of the famous Crescent, while the berries are larger than either. Season, medium to late; blossoms, pistillate.

JIM DUMAS.—From the originator of many well-known varieties from Arkansas. Some of the largest and finest berries I had last season were Dumas, and so glossy that they looked as though they had a coat of varnish. Color dark red, red to the center and of first-class quality. The plants are very large and make about the right number for the matted row. It is very productive and ripens early. The introducer says: "The berries are very large and perfect, running from 16 to 25 to the quart the first week or two, and then dropping from 30 to 40. The berries ripen nearly as early as Excelsior and will average twice as large. Unlike most large kinds it is a great yielder and holds out during a long season.

KLONDYKE.—Deserves its name for it has proved a gold mine for those who have grown it. Of beautiful uniform shape, rich red color, which extends through the berry, its fine appearance wins for it an assured popularity in every market. It has a mild delicious flavor unlike any other variety. Its foliage is light green, tall with medium leaves, a heavy yielder of medium to large fruits that are firm, that bring a good price. One of the best early berries that is being largely planted.

SAMPLE.—Late. Of large size and yields enormous quantities of berries of excellent quality. The fruit retains their large size until the end of the season. They are of bright red color, very firm and of rich flavor. A standard shipping variety; also fine for family use. Many excellent qualities are combined in this remarkable sort.

MICHEL'S EARLY.—Extra early. The healthy plants make a rampant growth, set many crowns and develop an abundance of choice fruit. Berries are of a scarlet color, possess a rich, mild, acid flavor and are very firm and solidly meaty. An old and very popular variety.

PATAGONIA.—From Luther Burbank, who considers it the crowning glory of many years of work along the line of strawberry breeding. He states that the plants are vigorous, and the fruit stalks are stiff, and hold the berries up from the ground. The fruit is scarlet in color, and the seeds are exceedingly small.

WILLIAM BELT.—There are few lovers of strawberries that would not cross a plot and pick out the William Belt as the best flavored. It is a standard for quality the country over. This variety is somewhat subject to rust, and for this reason for a time was not popular, but its superior quality and large size has made many friends for it, especially among the amateur growers who have an appreciative fancy market, or for the home table. I know of nothing that will approach it in quality of its season except Chesapeake. The demand for this variety has been much greater for the last few years, and we frequently dispose of every plant that we have.

CHIPMAN.—A mid-season variety of large size, fairly solid, bright red color, quite regular in shape and good flavor. Vine a very strong and deep rooter, making very large plants, very clean and healthy, free from rust. This variety originated in this country a few years ago, and now it is popular over a wide extent of territory. I recommended this variety to all of my customers, both for table and market use. Give it good care, and it will bring the cash every time. No one will go out of the way by planting this variety, for either home or market.

EXCELSIOR.—A standard for earliness by which all others are compared. The berries are about medium in size, very productive and firm; one of the best shipping berries on the list. If given half a chance it will take care of itself and bring splendid returns. It is too sour to suit the taste of the average person and has, therefore, never been popular for the home garden.

COLOSSUS.—To those who remember the Bubach as it was when introduced twenty-five years ago, it will be sufficient to say that the Colossus is all that the Bubach was in its vigorous growth, when first put on the market. It bears large, evenly-colored, handsome berries, literally lying in piles around the large, healthy, vigorous plants, which are produced in sufficient abundance to make wide matted rows where they are desirable. It is a berry that is bound to please all who wish to grow a large crop of large, rich, handsome berries.

NEW YORK.—This is a strictly fancy market variety and readily brings the highest prices in any market. The plants are of immense size, deep-rooted with bright glossy green foliage. Berries are of the largest size and excellent quality and unexcelled for the home garden.

ST. LOUIS.—This comparatively new variety is now widely known and valued as a money maker for the early market. The plant is a vigorous grower with a splendid root system, but should not be allowed to mat too thickly. The fruit is large, light bright red, nearly round, moderately firm and of good quality. The chief value of the St. Louis to the grower is its earliness, ripening the bulk of berries for the early market when prices are high, while it easily ranks among the largest in size of berry, and with the most productive varieties as a cropper.

HERITAGE.—Berries uniform, large, beautiful in shape; splendid color; delicious flavor. It is firm and makes a big yield; blossoms are staminate, or perfect and have a rich green cap, which adds very much to the appearance and market value.

Fall Bearing Strawberries

There are two classes of plants that are called Fall-bearing. One class has very many varieties, that bear few berries in the fall, mostly on the new runners, some on the old plants, after fruiting in the spring, caused by certain climatic conditions, generally a dry time followed by warm, moist weather, which develops the fruit buds out of season. These varieties seldom bear fruit in the fall on plants set the previous spring. I have never been able to get much of a crop from them under the most favorable conditions, and none in ordinary seasons.

There are, at least, eight varieties that bear fruit in the fall, let the weather conditions be what they may. It is of these I wish more earnestly to write, at this time, as they can be truly called Fall-bearing. I shall describe each separately, as there is a marked difference in them.

In setting out Productive, Teddy R. and Autumn, you should set every other row with some perfect blooming fall-bearing variety. Any of those marked (per.) they will give better results.

I have fruited all of these fall bearing varieties, and have found them to be O. K., and if they will do as well for you as they have done for me, I know that you will be more than pleased with them.

I guarantee all plants to be strictly true to name and first-class in every way. I want all of my customers to give these Fall Bearing Strawberries a trial.

These Fall Bearers are just as easy to grow as the June Bearing Varieties. The only secret of these plants is that you must keep all bloom stems removed as fast as they show up until about July 25th. After this date let the plants bloom and two weeks later you can pick ripe strawberries and the vines will continue to yield fruit until freezing weather.

SUPERB (Per)—This is undoubtedly the best of the Fall Bearing Strawberries. Fruit large, glossy and very attractive and of the finest flavor. The plants are strong, healthy growers, making a good number of new plants; it brings every blossom to maturity, there being no blanks, which is a strong point in a Fall Bearing Strawberry. We find the Superb bears better if not allowed to make too many runners. Price of plants, 3 for 25c, 6 for 40c, 12 for 80c, 25 for \$1.50, 100 for \$6.00.

PRODUCTIVE (Imp)—A seedling of Pan-American and Autumn. Plants model growers, large, deep rooted, sturdy and hardy. Berries medium to large in size, with prominent seeds on the outside, making it a good keeper and shipper. The crop produced by this variety is simply enormous. They lay about the plants in heaps and piles. This is considered by Mr. Cooper, the originator, the most Productive Fall Strawberry. Price of plants, 3 for 25c, 6 for 40c, 12 for 80c, 25 for \$1.50, 100 for \$6.00.

PAN-AMERICAN (Per)—Will yield in the fall months bumper crops of strawberries. It is just as persistent in bearing a crop of strawberries in the fall as other varieties are in the spring. All bloom stems must be picked off up to July 25th, after this let the blooms come, and three weeks later you can pick the first ripe strawberries, and the plants will continue to bloom and ripen fruit until cold weather. Price of plants, 6 for 40c, 12 for 80c, 25 for \$1.50, 100 for \$6.00.

AMERICUS (Per)—Plant medium sized, foliage medium; a shade lighter in color than Francis, has a good heavy root system, a fairly good plant maker, blossoms strongly staminate, fruit light red, heart shaped, of fine texture, good quality, half the size of Brandywine, fruit stems stout, holding fruit well off the ground, has fruited the past five years on spring set plants and new runners from July to cold weather. It is not uncommon for a spring set plant to produce from six to twelve well loaded fruit stalks. Price of plants, 6 for 50c, 12 for \$1.00, 25 for \$2.00, 100 for \$8.00.

FRANCIS (Per)—Plants medium sized, foliage medium sized and round with a hard glossy surface, root system medium, fruit medium to large, rather long. A nice glossy red, quality sweet and good. A fair plant maker, a strong staminate, fruit stems long and cannot hold its load of fruit from the ground. A sure variety to fruit on new plants. Spring set plants fruit from July till cold

weather. Quite productive. Has fruited during the past six years. Price of plants, 6 for 50c, 12 for \$1.00, 25 for \$2.00, 100 for \$8.00.

IOWA (Per).—A heavy and continuous fruiter from about August 10th to cold weather. Fruit medium to large, about the size of average Brandywines; color scarlet, firm, quality good. The plant is strong, vigorous and productive. Price of plants, 6 for 40c, 12 for 80c, 25 for \$1.50, 100 for \$6.00.

AUTUMN (Imp).—This is another grand Fall Bearing Strawberry, if grown in the hill system. It will not bear fruit if you let it make runners. It has averaged over one pint of berries to each plant with me. During August, September and October, the past two seasons, berries are about the size of Crescents. It is a pistillate, and must be planted near some perfect blooming fall variety. Price of plants, 40c per dozen; \$2.00 per 100, \$20.00 per 1000.

TEDDY R. (Imp).—Fall bearing. A very large berry. Grower who has been growing fall bearing strawberries for several years, says this is by far the best one he has tried, and that he has made two hundred per cent. more profit on this variety than on any other he has ever grown. It is a good plant maker, and will bear a large crop of berries and last until late frost in the fall. For best results Teddy R. should be grown in the hill system. It will not bear fruit if you let it make runners. Price of plants, 40c per dozen, \$2.00 per 100, \$20.00 per 1000.

Cabbage Plants

Early Jersey Wakefield.—Well hardened plants. Ready March 15th. 25c per 100; \$1.75 per 1000.

Charleston Wakefield and Early Winningstadt.—Ready April 20. 30c per 100; \$2.00 per 1000; \$1.25 per 1000 after May 15th.

Varieties marked (P) have pistillate blossoms, and to fruit them they must be planted near some variety with perfect blossoms. Those not marked (P) every third row will do. I will sell six of a kind at dozen rates; 50 of a kind at 100 rates.

Canadian customers when wanting plants sent by mail must add 5c per dozen, 13c per 50, and 25c per 100, to prepay rate as we have to pay double postage to your country.

My Strawberry Plants

Are always grown in new beds,
Are fresh dug at time of shipment,
Are planted in blocks and kept pure,
Are sold at as low a price as we can name,
And furnish good plants.

Fruit Trees

The prices are for one variety only, but 5—25—100 of a sort will be allowed at the 10—100—1000 rate.

APPLES

	Each	10	100	1000
5 to 6 feet—	\$0.50	\$3.50	\$28.00	\$240.00
4 to 5 feet—	.35	3.00	22.00	175.00
3 to 4 feet—	.30	2.50	18.00	125.00

A Select List of Varieties

Yellow Transparent.—Summer. The finest of all yellow apples, being in splendid condition, in early summer. Fruit is medium to large, with a beautiful waxy skin; flesh is juicy, tender and crisp. Tree a heavy annual bearer and thrives well in both the north and south.

Williams Early Red.—Summer. Medium sized, dark red, sometimes yellow splashed, Sub-acid.

Stayman's Winesap.—Similar to Winesap except larger, better quality and more productive. Season late, a good keeper.

Mammoth Black Twig.—Medium size, dark red; flesh yellow, firm and crisp, sub-acid; very vigorous and productive. Season late; a splendid keeper.

Grimes Golden.—Good size, yellow, high quality, hardy. Season late; a good keeper.

PEACHES

	Each	10	100	1000
5 to 6 feet—	\$0.35	\$2.50	\$15.00	\$100.00
4 to 5 feet—	.30	2.00	11.00	80.00
3 to 4 feet—	.25	1.50	10.00	65.00
2 to 3 feet—	.20	1.25	8.00	50.00

A Select List of Varieties

Belle of Georgia. First half of August. Fruit very large and most attractive in color and shape, with a light red cheek; flesh white, firm and delicious—in all ways the quality is fine. Trees grow quickly and shapely. Hardy; prolific. Free.

Reeves' Favorite. Middle of August. Large or extra large fruit; round; yellow with beautiful red cheek; flesh deep yellow, red at stone, juicy as a melon; of excellent flavor. One of the best lookers.

Old Mixon Free. Middle of August. Fruit large, pale yellow, with good red cheek; flesh white, with red stain at the stone; tender, rich and excellent. Tree fine and large, and does well in great variety of situations. Free.

Crawford's Late. First of September. One of the best late sorts. Superb in size and shape; splendid yellow, with broad, dark red cheek. Flesh deep yellow, juicy and melting, rich, winy flavor. Free. Tree vigorous, hardy and sure bearing.

Chairs's Choice. First of September. Extra large; deep yellow, with red cheek; flesh firm, sweetest and richest grapey flavor. Most satisfactory and all-round good. Trees make strong, sturdy growth, and bear big crops. Free.

Elberta. Middle of August. The old reliable, of which more is planted, and from which more money has been made than from any other Peach. Most dependable. Large to extra large; golden yellow, with brilliant shades of red; firm, juicy, rich, sweet. Vigorous, sturdy, hardy. Thrives in widely differing localities. Free.

Stump. Last two weeks in August. Large, round, white with brilliant red cheek. Flesh white, juicy, tender, yet firm, and of finest flavor. Tree vigorous and produce big crops. Free.

Champion. First of August. Fruit large, creamy white, with red cheek; sweet, juicy, very high qualities, and splendid. Good shipper; its fault, if any, is that it is too tender. Hardy and productive. Free. One of the showiest Peaches in our sample orchard.

Carman. Middle to end of July. Fruit large and broad, oval shaped, yellowish white; flesh creamy white, with red tinge; spicy and good. Especially suited to low, wet land. Very hardy and productive every year. Good shipper. Free.

Crawford's Early. Trees vigorous and very productive. Good size; yellow; juicy, sweet flavored; one of the standards for this ripening in commercial orchards. Free.

Niagara. Large, yellow, attractive. Free. Ripens last of August.

PEARS

	Each	10	100
5 to 6 feet—	\$0.50	\$3.50	\$28.00
4 to 5 feet -	.40	3.00	22.00
3 to 4 feet—	.30	2.50	18.00

A Select List of Varieties

Clapp's Favorite. Splendid grower, hardy and productive. Fruit large, handsome, flesh fine, grained juicy, rich and sweet. An excellent summer pear.

Seckel. Most exquisitely flavored Pear known. Fruit small, yellow with red cheek, sweet and aromatic. Ripens in August and September.

Kieffer. Very large, deep yellow russett dots, juicy, sweet, coarse. Immensely productive; fine for canning. Season late.

Bartlett. Large size, rich melting, delicious. Successful everywhere. Ripens in September.

PLUMS

4 to 5 feet—40c each; \$3.00 per 10; \$18.00 per 100.

A Select List of Varieties

Red June. Hardy, productive, upright growing trees. Fruit medium to large, deep vermilion red; flesh light yellow. Ripens here in August.

Abundance. Large, showy fruits of beautiful amber color, turning to rich, bright cherry. Flesh light yellow, tender, juicy, and highly perfumed. July.

Burbank. Large, nearly globular fruit of deep cherry red. Flesh deep yellow, very sweet and of a peculiar aromatic flavor. August.

CHERRIES

4 to 5 feet—30c each; \$2.50 per 10; \$15.00 per 100.

A Select List of Varieties

Early Richmond. Sour; very prolific; medium sized, dark red, juicy, acid. Unsurpassed for cooking. June.

Montmorency. Sour; virgorous, productive; large, light red, handsome. June.

Black Tartarian. Sweet, large, purplish, rich. Few kinds yield better, and none are more profitable over a term of years June.

Governor Wood. Healthy, productive, large; light red, rich. Good shipping sort and has an established place in markets. Sweet. Ripens in June.

THE HOOSIER POTATO

This valuable new Potato is pronounced by all who have grown it to be the greatest yielding potato ever introduced. The tubers are large to very large. It is a strong grower, almost exempt from bugs and absolutely blight proof owing to the vigorous growth of the vines. The vines remain green up to maturity. It is a perfect keeper. Skin is a pinkish tint. Season late. I would like for all of my customers to give this potato a trial, for I think you will be well pleased with it. Price—2 tubers for 25c; Peck 75c; $\frac{1}{2}$ Bushel \$1.25; Bushel \$2.50.

Testimonials

Mr. Basil Perry.

Dear Sir: I received the fruits trees O. K. They are very satisfactory.
Resp'y A. B. Robinson, Delaware.

Mr. Basil Perry.

Mr. Basil Perry.

Dear Sir: Have received the strawberry plants. They are fine plants.

Yours for future orders,

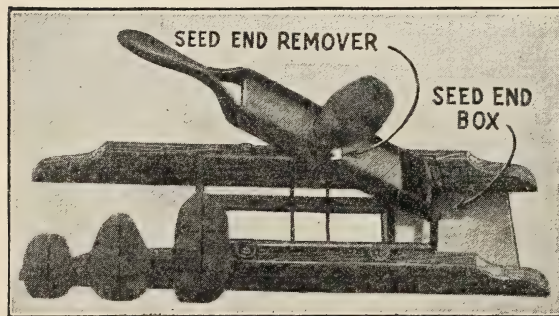

Chas. V. Perry, New Jersey, Sept. 23rd, 1912.

Mr. Basil Perry.

Dear Sir: Plants reached me in good condition.

Resp'y yours, Mrs. H. R. W. Cole, New York State, Sept. 27, 1912.

THE MILLER SEED POTATO CUTTER

THE MILLER SEED POTATO CUTTER. 24 inches long, 8 inches wide, weight 12 lbs. and cutter will last a lifetime. Can you afford to be without one? The construction of our seed cutter is very simple and is built for accuracy as well as convenience. It is strong and durable; the knives are of good quality steel and are fitted to grooves in frame, making them easy to remove if necessary. Seed potato cutting has always been a point on which a great many arguments have been produced, some even contending that hand cutting was necessary. The chief reason for this contention, however, being the high price charged for machines of this type in the past. The introduction of THE MILLER SEED POTATO

CUTTER does away with this argument, as it is the best machine on the market to-day at the lowest cost.

The Miller Seed Potato Cutter shown herewith has all the essential features necessary to a first-class tool. It will cut any size potato in pieces uniform in size, thereby insuring more accurate planting when power planter is used. The operator, to get the best results, will pick up the tuber, look for the seed or blossom end, passing it over the knife on upper side of pressure lever, thus removing the cause of so many empty potato hills in your potato patch. Then according to size of potato, place it on knives so that when lever is pushed down it will be cut into either two, four or six; or, if a very large one, split it and cut each half into as many pieces as its size will require. From six to eight bushels can be cut with it in an hour. The saving in time will more than pay for this cutter the first season it is used. **Send for Special Circular.**

PRICE \$2.50

Order Sheet

If we are sold out of anything ordered, may we substitute? If so, please state your preference . . .

[illegible]

Important Announcement

Orders should be sent in just as soon as possible after receiving this catalogue. It is better for you as well as the nurserymen.

Time of Shipment.—From the time you receive this catalogue to May 30th. By far the largest part of our shipments are made during March and April. Bermuda, Cuba, Florida, California and other similarly located sections are supplied any time during the fall and winter.

Guarantee.—I guarantee plants ordered by mail or express to reach customers in good condition when promptly taken from the express office and opened at once.

Claims, if any, must be made on receipt of goods when they will be carefully examined, and if just, made satisfactory. Claims made after ten days from receipt of goods will not be entertained.

If you receive more than one copy of this catalogue, please hand one to your neighbor fruit grower.

Express Rates.—All plants sent by express go twenty per cent. cheaper than other goods.

At Purchaser's Risk.—Plants shipped by freight will be at purchaser's risk, and all small fruit plants shipped after May 1st will be packed and shipped in the best condition possible, but always at purchaser's risk.

Packing is done in the best possible manner. All plants are cleaned, tied in bunches, and labeled and packed in light crates or baskets, for which I make no charge.

True to Name.—While I use every precaution to have all plants, trees, etc., true to name (and I believe we come as near doing this as anyone in the business), I will not be responsible for any sum greater than the cost of the stock should any prove otherwise than as represented.

Payment.—Invariably cash in advance. It is my desire that all customers should have the very best of success and strange as it may seem plants that are not paid for seldom do well.

Remit by Post Office, or Express Money Order, Registered Letter or Bank Draft. U. S. Postage stamps will be accepted for the fractional part of a dollar.

NOTICE

Notwithstanding we have had a very dry summer, I have an excellent stand of plants as strong, healthy and well rooted as you can get anywhere (no matter what you pay), and I want your orders for I know that I can serve you as well as anyone, and perhaps better than some others. Very truly yours,

BASIL PERRY.

Special Half-Price Offer

WE recommend FARM AND HOME to all of our readers living in rural districts as one of the best and most practical publications of its kind. It is issued twice a month and each number contains from 24 to 48 pages, devoted to the farm and its products. It will interest alike the farmer, stockman, truck grower, fruit grower, dairyman, the villager and every member of the family, including the boys and girls. It is clean, bright and reliable all the way through; well printed and generously illustrated.

"THE VEGETABLE GROWER"

published at Chicago, Ill., is a monthly magazine devoted to the growing of vegetables, small fruit and flowers, edited in a clean understandable way, by authorities in their chosen fields. It comes to you twelve times a year to assist in the hundred and one things that may perplex you. Each issue will be worth what you pay for it for an entire year. It is the only paper of its kind in the world. The editors and contributors are practical growers and we can say that the paper is practically edited from the field. It is of help to many thousands and can be of help to you.

PUBLISHERS FARM JOURNAL

Mail this Mutual Benefit Coupon today with A DOLLAR BILL direct to the Farm Journal.

BASIL PERRY,

Cool Spring, Delaware

Plants, Seeds, and Nursery Stock

SEE OTHER SIDE

THE RURAL NEW-YORKER is a farm paper, edited and published by farmers for farmers. It is a paper you want to know. It is clean, bright and reliable. It is honest. No fake advertisements, and no paid editorial puffs for any one. It speaks right out as a champion of farming interests everywhere. It is down on the earth, close to the plain people, and tells what you want to know in language that you can understand. Every line is fresh, original and reliable. You can go no higher for information on the farm. It is the court of last resort. It is 60 years old and has subscribers in all parts of the world. The subscription price is \$1 a year. If you are not now taking it, however, you may have A 10 weeks' trial for 10 cents just to give you a chance to know it. Write your name and address on the lines inside, then put a dime in the pocket at the point of the arrow, turn down small flap and then seal with large one, and mail direct. The address is on the envelope. Do it to-day.

It is safe for your wife and children to read; every member of the family will read it with pleasure and profit.

Presented with the compliments of

BASIL PERRY,

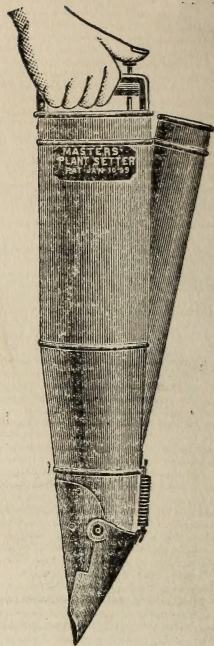

COOL SPRING, DEL.

Honest men like it and praise it.

If you are looking for
the Grandest Little Tool
ever used or ever seen
for Setting Plants

Here it is
